NEW INVENTION SPEEDS OIL REFINING;
POWER PLANTS PUT INTO OPERATION

INVENTION SPEEDS OIL REFINING -- Politika, No 13204, 7 Apr 49

The Main Administration for Petroleum and Gas has fulfilled its 3-months' plan for production in petroleum refineries by 118.7 percent.

The best results were achieved in the refinery at Sisak, which surpassed its plan by 17.5 percent. An invention by two engineers there has increased production by 237 percent. Formerly light and heavy distillates were obtained by passing crude petroleum through two special stills. The combination still invented in the Sisak refinery produces both light and heavy distillates, whereas the special still produces only one or the other. This invention has increased the capacity of the stills by 30 percent, and saves 30-50 calories per kilogram of petroleum.

About two thirds of the operations at the Sisak refinery are organized under the brigade system.

NEW INDUSTRIAL AND CITY POWER PLANT -- Politika, No 13202, 4 Apr 49

A new electric power plant has been formally put into operation at Slavonski Brod. It will furnish electric power to both Slavonski Brod, Slavonia, and Bosanski Brod, Bosnia. The plant was built to furnish power to the "Djuro Djakovic" enterprise, which has been receiving its power in the past from the city.

The installation of modern machinery in the power plant has been completed by the municipal "Struja" (Current) enterprises in Slavonski Brod.
